

Selection of Aquaculture Lines with improved Traits

Gulf of Mexico Oyster Genetics and Breeding Research Consortium

Research Partners

USM: Eric Saillant, Kelly Lucas
AU: Bill Walton
UF: Huiping Yang, Leslie Sturmer
TAMUCC: John Scarpa
4C's Breeding: Tom Rossi
LASG: Brian Callam

Business Advisory Council

AL: Lane Zirlott, John Webster
FL: Don McMahon, Jeff Tilley
LA: Boris Guerrero
MS: Andy Fountain, Jennifer Jenkins
TX: William Balboa, Lee Znekek

Purpose: To assist industry and state agencies by developing genetic resources for the eastern oysters of the Gulf of Mexico and creating a breeding program to improve production and market value traits as directed by industry needs.

Highlights

- Funding awarded 2019
 - 5 years contingent on federal appropriations to the program
- Year 1 Milestones
 - Breeding objectives: Survey of Industry needs
 - Collect Broodstock
 - Mature Broodstock
 - Genotyping
 - Cryopreservation
 - Spawning

Industry Survey of Desired Traits for Gulf Oyster's

Name:
State:

Email:
Company:

Score criteria: 1. Greatest importance; 2. High importance; 3. Medium importance; 4. Low importance, 5. Least importance

Target Traits for Breeding	Score				
Yield-Focused Traits	
Ability to grow and survive in environments where salinity is variable throughout the season; for example low or high swings in salinity	1	2	3	4	5
Ability to grow and survive in mid salinity environments	1	2	3	4	5
Ability to grow and survive in high salinity environments	1	2	3	4	5
Ability to grow and survive in low salinity environments	1	2	3	4	5
Ability to grow and survive in high water temperatures	1	2	3	4	5
Ability to grow and survive in low water temperatures	1	2	3	4	5
Increased tolerance to low dissolved oxygen	1	2	3	4	5
Disease resistance during grow out**	1	2	3	4	5
Market-Focused Traits					
Improve shell shape in regard to cup and fan	1	2	3	4	5
Eliminate 'backbend' at hinge	1	2	3	4	5
Improve shell thickness to reduce shell breakage	1	2	3	4	5
Hatchery-Focused Traits					
Increase reproductive capability resulting in higher quality and quantity of gametes	1	2	3	4	5
Timing of reproduction	1	2	3	4	5
Increased survival in the hatchery	1	2	3	4	5
Disease resistance in the hatchery**	1	2	3	4	5

**if important, state which disease/diseases in the comments
